

SPECIFICATIONS FOR HIGHWAY BRIDGES

PART IV SUBSTRUCTURES

MARCH 2002

JAPAN ROAD ASSOCIATION

CONTENTS

Part IV : SUBSTRUCTURES

Chapter 1	General	1
1.1	Scope	1
1.2	Definitions of Terms	2
1.3	Fundamentals of Design Calculations	3
1.4	Conditions of Construction for Design	4
1.5	Items to be Shown in Drawings	4
Chapter 2	Survey	6
2.1	General	6
2.1.1	Fundamentals	6
2.1.2	Types of Surveys	6
2.2	Geotechnical Investigation	14
2.2.1	General	14
2.2.2	Preliminary Surveys	15
2.2.3	Principal Surveys	17
2.2.4	Evaluation of Geotechnical Parameters for Design	29
2.3	Survey of River Characteristics and Water Utilization	34
2.4	Survey of Construction Conditions	36
Chapter 3	Fundamentals of Design	38
3.1	General	38
3.2	Load Combinations in Design Calculations	41
3.3	Verification of Safety for Loads	46
Chapter 4	Allowable Stresses	49
4.1	General	49
4.2	Allowable Stresses of Concrete	50
4.3	Allowable Stresses of Reinforcing Bars	59
4.4	Allowable Stresses of Steel for Structures	61

4.5	Allowable Stresses of PC Steel Materials	62
Chapter 5 Verification of Structural Members		64
5.1	Verification of Structural Members for under Ordinary, Extreme Wind, and Level 1 Earthquake Conditions.....	64
5.1.1	General	64
5.1.2	Verification of RC Members Subjected to Bending Moments or Axial Forces	64
5.1.3	Verification of RC Members Subjected to Shear Forces	65
5.2	Verification of Members for Under Level 2 Earthquake Condition	70
5.2.1	General	70
5.2.2	Verification of RC Members Subjected to Bending Moments or Axial Forces	70
5.2.3	Verification of RC Members Subjected to Shear Forces	72
Chapter 6 Durability		75
6.1	General	75
6.2	Examination of Salt Damage	76
Chapter 7 Structural Details of Reinforced Concrete Members		81
7.1	Scope	81
7.2	General	81
7.3	Minimum and Maximum Amount of Reinforcement	82
7.4	Reinforcement Cover.....	85
7.5	Clear Distance between Reinforcement Bars.....	86
7.6	Anchorage of Reinforcement Bar.....	87
7.7	Hook and Bent Shape of Reinforcement	91
7.8	Joint of Reinforcement Bars	93
7.9	Axial Reinforcement Bar	95
7.10	Stirrup	95
7.11	Hoop Tie	97
7.12	Tie	98
Chapter 8 Design of Piers, Abutments, and Footings		101
8.1	Scope	101
8.2	General	101
8.2.1	Structural Configuration.....	101

8.2.2	Design of Structures with Large Width	102
8.2.3	Protection against colliding objects	103
8.3	Design of Piers	104
8.3.1	T-shaped Piers	104
8.3.2	Rigid-frame Piers	107
8.4	Design of Abutments	110
8.4.1	Reverse T-shaped Abutments	110
8.4.2	Skew abutments	113
8.4.3	Design of parapets	117
8.4.4	Design of wing walls	123
8.4.5	Rear side of abutment	126
8.5	Column-Footing Connections and Wall-Footing Connections	127
8.6	Design of Bridge Seats	128
8.7	Footings	135
8.7.1	General	135
8.7.2	Thickness of Footings	137
8.7.3	Design for Bending Moments	139
8.7.4	Design for Shear Forces	144
8.7.5	Arrangement of Reinforcement	157
Chapter 9	Fundamental Requirements for Stabilization of Foundations	161
9.1	Selection of Foundation Types	161
9.2	Basic Requirements of Design	162
9.3	Selection of Bearing Layer and Embedment Depth Requirements	170
9.4	Design Ground Surface	173
9.5	Coefficients of Subgrade Reaction	175
9.5.1	General	175
9.5.2	Coefficients of Subgrade Reactions	177
9.6	Calculation of Subgrade Reaction and Displacement	180
9.6.1	General	180
9.6.2	Subgrade Reaction Elastic Displacement	181
9.6.3	Consolidation Settlement	181

9.7	Deep Foundations to be Constructed Deep in Grounds Subject to Consolidation Settlement	186
9.8	Foundations Subjected to Eccentric Loads	187
9.9	Foundations of Skewed Abutments	188
Chapter 10	Design of Spread Foundations	191
10.1	Fundamentals of Design	191
10.2	Load Shearing	194
10.3	Allowable Bearing Capacity of Ground	195
10.3.1	Allowable Vertical Bearing Capacity of Ground below Base of Foundation	195
10.3.2	Allowable Horizontal Bearing Capacity of Ground	205
10.3.3	Allowable Shear Resistance of the Ground below the Base of a Foundation	206
10.4	Coefficients of Subgrade Reactions	209
10.5	Calculation of Subgrade Reaction Intensity and Displacement	212
10.6	Design of Footings	216
10.7	Treatment of Foundation Base and Backfill Materials	219
10.7.1	Foundation Base	219
10.7.2	Backfill Material	220
Chapter 11	Design of a Caisson Foundation	222
11.1	Basic Requirements of Design	222
11.2	Load Sharing	225
11.3	Shapes and Dimensions	227
11.4	Allowable Bearing Capacity of Soil Layer	230
11.4.1	Allowable Vertical Bearing Capacity of Soil Layer	230
11.4.2	Allowable Shear Resistance of Soil Layers at the Bottom of Foundation	236
11.4.3	Negative Skin Friction	237
11.5	Coefficient of Ground Reaction and Upper Limit Value of Subgrade Reaction	239
11.5.1	Coefficient of Ground Reaction	239
11.5.2	Upper Limit Value of Ground Reaction	242
11.6	Calculations of Sectional Force, Ground Reaction, and Displacement	247
11.7	Design of Various Members of Foundation	255
11.7.1	Caisson Side Wall and Partition	255

11.7.2	Top Slab	264
11.7.3	Top Slab Bearing Unit.....	267
11.7.4	Bottom Plate of Open Caisson.....	269
11.7.5	Cutting Edge.....	270
11.7.6	Ceiling Slab for Pneumatic Caisson Working Chamber and Suspended Beams for the Ceiling Slab.....	271
11.7.7	Parapet	274
11.7.8	Examination of Stresses during Construction.....	275
11.8	Verification for Level 2 Earthquakes.....	276
11.8.1	Basics of Verification.....	276
11.8.2	Yielding of Foundation	278
11.8.3	Limit Values for Ductility Factor and Displacement of Foundations.....	280
11.8.4	Calculation on Sectional Force, Subgrade Reaction and Displacement.....	281
11.8.5	Verification for the Strength of Members.....	284
11.9	Details of Structure.....	286
11.9.1	Construction Joint.....	286
11.9.2	Reinforcement around Pneumatic Caisson Shaft Holes.....	286
11.9.3	Arrangement of Reinforcing Bars on the Side Walls.....	287
Chapter 12	Design of Pile Foundations.....	289
12.1	Fundamentals of Design	289
12.2	Load Shearing	292
12.3	Arrangement of Piles.....	292
12.4	Allowable Bearing Capacity of Piles.....	294
12.4.1	Axial Allowable Bearing Capacity of Single Pile.....	294
12.4.2	Axial allowable pull-out force of Single Piles.....	306
12.4.3	Negative Skin Friction	308
12.4.4	Consideration of Group Piles Effects.....	314
12.5	Coefficient of Horizontal Subgrade Reaction	317
12.6	Spring Constants	317
12.6.1	Axial Spring Constants of Piles.....	317
12.6.2	Radial Spring Constant of Piles.....	320

12.7	Calculation of Pile Reactions and Displacements	323
12.8	Design of Pile Foundation under Special Conditions	327
12.9	Design of Pile	334
12.9.1	Design of Piles against Loads after Construction	334
12.9.2	Pile Joints	346
12.9.3	Connections between Pile and Footing	346
12.9.4	Examinations for Construction Period	351
12.10	Verification for Level 2 Earthquake Condition	352
12.10.1	Basics of Verification	352
12.10.2	Yielding of Foundation	354
12.10.3	Allowable Ductility Factor and Displacement of Foundations	354
12.10.4	Calculation of Sectional Forces, Pile Head Reactions, and Displacements	356
12.10.5	Verification of Structural Members	364
12.11	Structural Details	366
12.11.1	PHC Piles	366
12.11.2	RC Piles	368
12.11.3	Cast-in-place RC Piles	369
12.11.4	Steel Pipe Piles	377
12.11.5	Steel Pipe Soil Cement Piles	382
12.11.6	SC Piles	384
Chapter 13	Design of Steel Pipe Sheet Pile Foundation	386
13.1	Basic Requirements of Design	386
13.2	Load Sharing	389
13.3	Shape and Size	390
13.4	Allowable Bearing Capacity of a Steel Pipe Sheet Pile	392
13.4.1	Allowable Bearing Capacity of a Steel Pipe Sheet Pile	392
13.4.2	Allowable Pull-out Force of a Steel Pipe Sheet Pile	394
13.4.3	Negative Skin Friction	396
13.5	Coefficient of Ground Reaction	398
13.6	Calculation of Sectional Force, Unit Ground Reaction and Displacement	399
13.7	Design of Various Members of Foundation	406

13.7.1	Steel Pipe Sheet Pile	406
13.7.2	Top Slab	406
13.7.3	Design of Connection between Top Slab and Steel Pipe Sheet Pile	409
13.8	Cofferdam	410
13.9	Verification for Level 2 earthquake conditions	411
13.9.1	Basics of Verification	411
13.9.2	Yield of Foundation	412
13.9.3	Allowable Ductility Factor and Allowable Displacement of Foundation	413
13.9.4	Calculation on Sectional Force, Ground Reaction and Displacement	414
13.9.5	Verification for Strength of Members	418
13.10	Details of Structure	419
Chapter 14	Cast-In-Situ Diaphragm Wall Foundation Designs	423
14.1	Basic Requirements of Design	423
14.2	Load Sharing	425
14.3	Shape, Size, and Joint	427
14.4	Allowable Bearing Capacity of Ground	427
14.4.1	Allowable Vertical Bearing Capacity of Foundation Bed Ground	427
14.4.2	Allowable Shear Resistance of Foundation Bed Ground	429
14.4.3	Negative Skin Friction	430
14.5	Coefficient of Ground Reaction and Upper Limit Value Of Subgrade Reaction	431
14.5.1	Coefficient of Ground Reaction	431
14.5.2	Upper Limit Value of Ground Reaction	433
14.6	Calculations of Sectional Force, Ground Reaction, and Displacement	435
14.7	Design of Foundation Body	436
14.8	Verification for Level 2 Earthquakes	438
14.8.1	Principles of Verification	438
14.8.2	Yield of Foundation	439
14.8.3	Allowable Ductility Factor and Allowable Displacement of Foundation	439
14.8.4	Calculation on Section Force, Subgrade Reaction and Displacement	439
14.8.5	Verification for Strength of Members	441
14.9	Details of Structure	442

14.9.1	Joint between Elements	442
14.9.2	Connection between Cast-in-situ Diaphragm Walls and Top Slabs	443
14.9.3	Thickness of Wall	444
14.9.4	Arrangement of Reinforcing Bars	445
14.9.5	Lap-joint of Vertical Reinforcing Bars	446
Chapter 15	General Requirements on Execution of Work	448
15.1	Scope	448
15.2	General Items of Construction Work	448
15.3	Survey for Construction Work	449
15.4	Execution Program	450
15.5	Work Record	452
Chapter 16	Construction of Caisson Foundation	454
16.1	Method to be Applied	454
16.2	Selection of Construction Machines and Instruments	454
16.3	Temporary Facilities	455
16.4	Cutting Edges	456
16.5	Installation of a Caisson	456
16.6	Caisson Main Body	457
16.7	Excavation and Sinking	458
16.8	Verification of Bearing Ground	461
16.9	Top Slab	462
16.10	Cut-off Walls and Temporary Retaining Walls	462
16.11	Center	463
16.12	Equipment Work	464
16.13	Concrete Filling of a Pneumatic Caisson	465
16.14	Bottom Slab of an Open Caisson	466
Chapter 17	Construction of Prefabricated Pile Foundation	467
17.1	Method to be Applied	467
17.2	Selection of Construction Machines and Instruments	468
17.3	Test Piling	469
17.4	Preparation for Construction	469

17.5	Transportation, Storage, and Inspection	470
17.6	Installation	471
17.7	Site-welded Joint.....	471
17.8	Finishing of a Pile Head	472
17.9	Disposal of Excavated Earth.....	473
17.10	Driving a Pile and Finishing the Driving Operation.....	473
17.11	Pile-boring Method	477
17.11.1	Excavation and Sinking.....	477
17.11.2	Treatment of a Pile Tip.....	479
17.12	Preboring Pile Method.....	481
17.12.1	Boring	481
17.12.2	Injection of Foot Protection Fluid and Pile Periphery Fixing Fluid.....	481
17.12.3	Sinking	482
17.13	Steel Pipe and Soil Cement Composite Pile Method.....	482
17.13.1	Preparation of Soil Cement Column	482
17.13.2	Sinking of Steel Pipe.....	484
Chapter 18	Construction of Cast-In-Place Pile Foundation	486
18.1	Method to be Applied	486
18.2	Selection of Construction Machines and Instruments	487
18.3	Test Piling	487
18.4	Preparation for Installation	488
18.5	Cast-in-place Pile Method by Mechanical Excavation.....	490
18.5.1	Excavation.....	490
18.5.2	Protection of Bore Wall from Collapse	491
18.5.3	Disposal of Excavated Earth	492
18.5.4	Completion of a Bore Bottom	492
18.5.5	Reinforcement	493
18.5.6	Concrete	494
18.6	Deep Foundation Method	495
18.6.1	Disposal of Spring Water and Ground Water.....	495
18.6.2	Excavation.....	496

18.6.3	Protection of Bore Walls from Collapsing.....	497
18.6.4	Completion of a Bore Bottom	498
18.6.5	Reinforcement Bars	498
18.6.6	Concrete	498
18.6.7	Backfilling.....	499
Chapter 19	Construction of Steel Pipe Sheet Pile Foundation.....	500
19.1	Method to be Applied	500
19.2	Test Piling	501
19.3	Installation of Guide Materials.....	502
19.4	Driving a Pile and Finishing the Driving Operation.....	502
19.5	Filling Concrete and Finishing of Joint Pipes	504
19.6	Cofferdam and Top Slab	504
19.6.1	Construction of a Cofferdam	504
19.6.2	Top Slab Connection and Top Slab.....	506
19.6.3	Removing Support Timbering and Steel Pipe Sheet Piles Acting as Cofferdam	506
Chapter 20	Construction of The Cast-In-Situ Diaphragm Wall Foundation.....	507
20.1	Method to be Applied	507
20.2	Test Work.....	507
20.3	Preparations for Construction and Temporary Facilities	507
20.3.1	Preparations for Construction.....	507
20.3.2	Temporary Facilities	509
20.4	Excavation	510
20.4.1	Element Allocation	510
20.4.2	Stability of Trench Walls	510
20.4.3	Slurry	511
20.4.4	Excavation.....	512
20.4.5	Slime Processing.....	512
20.5	Reinforcing Bars and Element Joints	513
20.5.1	Fabrication & Installation of Reinforcement Steel Cages	513
20.5.2	Element Joints	514
20.6	Concrete.....	515

8.3.2	Calculation of Lateral Force on Foundations by Liquefaction-induced Ground Flow	152
Chapter 9	Verification of Seismic Performance of Seismically Isolated (Menshin) Bridges.....	156
9.1	General.....	156
9.2	Verification of Seismic Performance of Seismically-Isolated Bridges.....	162
9.3	Analytical Model of Isolation Bearings.....	165
9.3.1	General.....	165
9.3.2	Inelastic Hysteretic Model of Isolation Bearings.....	165
9.3.3	Equivalent Linear Model of Isolation Bearings.....	166
9.4	Basic Performance Requirement for Isolation Bearings.....	171
9.5	Other Structures for reducing Effects of Earthquake.....	173
Chapter 10	Lateral Strength and Ductility Capacity of Reinforced Concrete Columns.....	174
10.1	General.....	174
10.2	Evaluation of Failure Mode, Lateral Strength and Ductility Capacity	175
10.3	Calculation of Lateral Strength and Displacement	181
10.4	Stress–Strain Curve of Concrete	188
10.5	Shear Strength.....	193
10.6	Structural Details for Improving Ductility Performance	199
10.7	Cut-off of Longitudinal Reinforcement at Mid-Height	209
10.8	Lateral Strength and Ductility Capacity of Reinforced Concrete Two Column Bents	212
10.9	Effect of Eccentric Loading of Superstructure	226
Chapter 11	Verification of Seismic Performance of Steel Columns	231
11.1	General.....	231
11.2	Verification of Seismic Performance by Dynamic Analysis.....	232
11.3	Structural Details	241
11.4	Design for Anchorage Block.....	247
Chapter 12	Verification of Seismic Performance of Pier Foundations.....	249
12.1	General.....	249
12.2	Calculation of Sectional Force, Ground Reaction Force, and Displacement of Pier Foundations	252
12.3	Yielding of Pier Foundations	256
12.4	Calculation of Foundation Response in Case of Plastic Hinges Generating in Pier Foundations	257
12.5	Ductility and Displacement Capacity of Pier Foundations.....	260
12.6	Design of Members of Pier Foundations	261
