

iCESTOPPER-R

iCESTOPPER-R

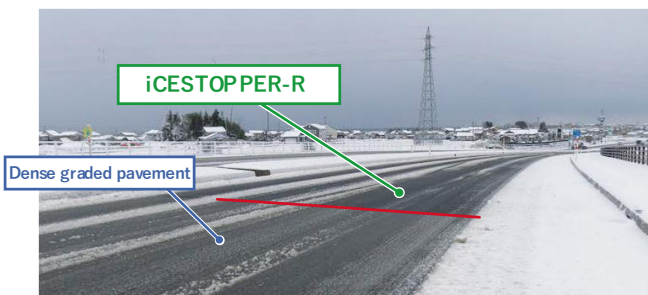

Technology Overview

iCESTOPPER-R is a freezing prevention pavement that involves laying SMA containing rubber particles and additionally bonding rubber particles to its surface.

Key Features

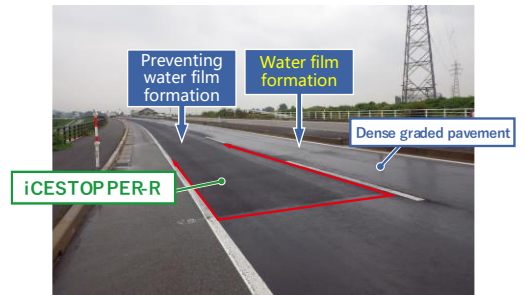

1 Freezing-prevention

Rubber particles within the pavement surface and mixture deform under traffic loads, crushing and removing snow and ice.

2 Driving safety

By ensuring sufficient surface texture depth, the formation of water films on the pavement is prevented.

Construction Method

iCESTOPPER-R is applied using standard paving equipment with an attached rubber particle spreading machine.
